OF

JAVA FULL STACK INTERNSHIP

Basic E-Commerce Website Project

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement for the degree of

B.Tech CSE

By

Name of Student: RISHIKANT
Admission No./Roll No.: 25SCS1003000495
Batch: 2026-27

2026-27

1. CANDIDATE'S DECLARATION

I, RISHIKANT, hereby declare that the internship report titled “Java Full Stack Internship – Basic E-Commerce Website Project” has been prepared by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. This report presents the work and learning undertaken during my Java Full Stack internship with Data Alcott Systems and describes the basic e-commerce website developed as a training project. I have also included my completed Simplilearn course certificate, “Getting Started with Machine Learning Algorithms,” as supporting evidence of additional technical learning. The information presented in this report is based on my training experience and the documents submitted with it. I affirm that this report has not been submitted to any other institute for any degree or diploma requirement and that I shall be responsible for any copyright violation arising from material used in this report.

Admission No./Roll No.: 25SCS1003000495

2. ACKNOWLEDGEMENT

I would like to express my sincere gratitude to everyone who supported and guided me throughout my internship and learning journey. I am thankful to Data Alcott Systems for providing me the opportunity to undergo a Java Full Stack internship and gain practical exposure to industry-oriented learning. The internship helped me apply programming and web-development concepts through a basic e-commerce website project and improved my understanding of the overall full-stack development process.

I am also grateful to my trainers and mentors for their guidance, constructive feedback and encouragement during the training period. In addition, I successfully completed the Simplilearn course “Getting Started with Machine Learning Algorithms”, which helped me strengthen my foundational understanding of Machine Learning concepts.

Finally, I express my heartfelt gratitude to my parents and everyone who continuously encouraged me to learn, experiment and improve my technical skills.

Student Name: RISHIKANT

Admission No./Roll No.: 25SCS1003000495

3. INTERNSHIP DOCUMENTS AND SUPPORTING CERTIFICATION

The internship document issued by Data Alcott Systems is an Internship Confirmation Letter. According to the supplied document, Rishikant was selected to undergo a Java Full Stack internship at Data Alcott Systems. The letter records Registration No. 25SCS1003000495, B.Tech-CSE at IILM University, the Java Full Stack domain, remote mode, internship duration from 16/08/2026 to 30/08/2026, and Reporting Manager Gokul Rajan. The document carries Certificate ID DAS-CONF-719/2026 and an issue date of 16/08/2026. filecite turn1file1 L2-L18

The supporting Simplilearn certificate is for “Getting Started with Machine Learning Algorithms”. It is issued in the name of Rishikant, dated 23rd November 2025, with certificate code 9456900. This certificate is included as an additional technical-learning credential and is not presented as the internship certificate. filecite turn1file0 L2-L5

Note: The original supplied documents are appended to the final PDF after the report pages so that the submission contains the documentary evidence together with the written report.

4. PROJECT DESCRIPTION

4.1 Introduction

As part of the Java Full Stack internship at Data Alcott Systems, I worked on a basic e-commerce website as a practical training project. The purpose of the project was to apply full-stack development concepts in a real project-oriented environment and understand how different parts of a web application work together. The project is intentionally described as a basic e-commerce website rather than a complete commercial e-commerce platform.

The project provided practical exposure to web application development, application flow, user interaction and the organization of a full-stack project. The internship confirmation letter specifically states that the internship provides practical exposure to industry-oriented tasks and real-time learning in Java Full Stack. filecite turn1file1 L19-L22

4.2 Organization Profile

Data Alcott Systems provided the internship opportunity in the Java Full Stack domain. The supplied confirmation letter identifies the organization as Data Alcott Systems and states that the internship was conducted in Remote mode from 16/08/2026 to 30/08/2026. The document names Gokul Rajan as the Reporting Manager. filecite turn1file1 L12-L18

The internship was focused on practical exposure and real-time learning in Java Full Stack, with the stated purpose of enhancing technical knowledge and professional skills. filecite turn1file1 L19-L22

4.3 Problem Statement

The project addressed the learning problem of understanding how a web-based e-commerce application can be structured and developed using full-stack programming concepts. The task was to create a basic e-commerce website that could serve as a practical demonstration of the concepts covered during Java Full Stack training.

Since the project was completed in a training environment, the focus was on learning, implementation and understanding rather than building every feature required by a large-scale production e-commerce system.

4.4 Project Objectives

- To gain practical experience in Java Full Stack development.
- To apply concepts learned during training to a working web-based project.
- To understand the basic structure and workflow of an e-commerce website.
- To strengthen programming, debugging and problem-solving skills through hands-on implementation.
- To understand how different application components contribute to a complete web application.
- To improve professional and project-development skills through internship-based learning.

4.5 Scope of the Project

The scope of the project covers the development of a basic e-commerce website as a training assignment. The website demonstrates the application of full-stack development concepts in an e-commerce context. It should be viewed as an academic/training project and not as a claim of a fully deployed commercial platform.

The project can be extended in future with additional production-oriented capabilities such as stronger security, database-backed product and order management, advanced authentication, payment integration, administration features, cloud deployment and scalability improvements. These extensions are outside the scope of the work described here.

4.6 Technologies and Tools Used

Technology / Area	Purpose / Application
Java	Programming and application-development concepts used during the training.

Technology / Area	Purpose / Application
Java Full Stack	Full-stack concepts and development practices covered during the internship.
Web Development	Development of the web-based interface and application flow.
E-Commerce Project	Practical training project used to apply full-stack concepts.
Machine Learning	Additional technical learning through the completed Simplilearn course.

4.7 System Architecture

At a conceptual level, the project can be understood as a web application in which the user interacts with a front-end interface, application logic processes user requests and the relevant data is handled by the application's data layer. This layered view helped in understanding how front-end interaction and back-end processing are connected in a full-stack application.

The report deliberately does not claim a specific database, framework or deployment architecture because those details were not stated in the supplied internship letter or certificate. The final technical architecture should be matched to the actual project source code if a detailed implementation diagram is required.

4.8 Methodology

- Understand the basic requirements and workflow of an e-commerce website.
- Study and apply relevant Java Full Stack concepts during the internship.
- Plan the basic structure and flow of the web application.
- Implement the e-commerce project as a practical training exercise.
- Test the implemented functionality and identify issues during development.

- Debug and improve the implementation based on testing and learning.
- Review the overall project and document the learning outcomes from the internship.

4.9 Expected Outcomes

The primary expected outcome of the internship was practical familiarity with Java Full Stack development and the ability to apply learned concepts in a project. The basic e-commerce website provided hands-on experience in translating learning into an application-oriented task.

- Improved understanding of full-stack application development.
- Practical exposure to developing a web-based project.
- Improved debugging and problem-solving ability.
- Better understanding of project structure and development workflow.
- Improved confidence in applying Java Full Stack concepts to practical tasks.

4.10 Certificates of Completion and Other Communication / Mail Proof

The Data Alcott Systems Internship Confirmation Letter and the Simplilearn Machine Learning certificate are appended to this report as supporting documents. The Data Alcott Systems document confirms the internship selection and details of the Java Full Stack internship, while the Simplilearn document supports the additional technical learning completed by the student. filecite turn1file1 L6-L18 filecite turn1file0 L2-L5
